

A. Course Handout

Institute/School Name	Chitkara University Institute of Engineering & Technology		
Department Name	Department of Computer Science and Engineering		
Programme Name	B.E (Computer Science & Engineering)		
Course Name	Advanced Data Structures	Session	Jan – June 2026
Course Code		Semester/Batch	6 th /2023
L-T-P(Per Week)		Course Credits	03
Pre-requisite	Basic knowledge of Programming Concepts	NHEQF Level	05 ¹
Course Coordinator	Dr. Shivani Wadhwa	SDG Number	4,8,9 ⁴

1. Objectives of the Course

The scope of the course is to provide a comprehensive foundation for understanding core concepts of data structures and algorithms, and to develop strong problem-solving and analytical skills. Students will gain in-depth knowledge of arrays, strings, recursion, and backtracking, along with a solid grounding in object-oriented programming principles. The course emphasizes both linear and non-linear data structures and explores various algorithm design strategies through practical examples, enabling learners to analyze and evaluate data structures effectively for real-world applications. The objectives of the course are:

- to understand the detailed view of Arrays, Strings, Recursion, Backtracking.
- to build strong object-oriented programming fundamentals and proficiency in linear and non-linear data structures.
- to explore and implement various algorithm design strategies using illustrative examples.
- to analyze and evaluate different data structures for efficient problem-solving.
- to implement the concepts of data structures and algorithms by solving complex engineering problems and preparing well for interviews, competitions, and hackathons.

2. Course Learning Outcomes

After completion of the course, the student should be able to:

	Course Learning Outcome	*POs	NHEQF Level Descriptor ¹	Sessions
CLO01	Understand the detailed view of data structures and algorithms with underlying mathematics behind it.	PO1, PO2, PO4	Q1, Q2, Q6	11
CLO02	Revisit Object Oriented fundamentals along with the concepts of other linear data structures like Linked lists and Stacks and non-linear data structures like Graphs, Tries, Binary Trees and its variations; with main emphasis on Interview based questions.	PO1, PO8, PO9	Q3, Q5	19
CLO03	Explore various algorithm strategies such as DP, Greedy Method, Backtracking and Bit-masking.	PO2, PO3, PO5	Q2, Q4, Q6	28
CLO04	Analyse and evaluate different data structures and will be able to prepare well for Interview panels through numerical understanding of the concepts.	PO2, PO4	Q2, Q3, Q4, Q6	12
CLO05	Implement the concepts of data structures and algorithms on several forums like code-chef, coding ninjas, GFG and Hacker Rank.	PO7, PO8, PO10, PO11	Q6	20
Total Contact Hours				90

Revised Bloom's Taxonomy Terminology

* PO's available at (shorturl.at/cryzF)

**Cognitive Level =CL

6. Course Plan:

Lecture Number	Topics	Textbook
1	Detail Discussion of Course Handout (CHO)	B01-Chpater-1
2-4	Arrays – 1: Advance Problems on Sliding Windows and Two pointers will be discussed.	B01-Chapter-1
5-6	Arrays – 2: Discussion Frequency Arrays and Prefix Arrays and Its Problems.	B01-Chapter-2
7-9	Binary Search: Binary Search, Its Implementation and Advance Binary Search problems will be discussed.	B01-Chapter-7
10-11	Array Advanced Algorithms – 1: Kadane's Algorithm, Prime Seive, Vectors and Amalgamation of the above topics will be discussed.	B01-Chapter-13 B01-Chapter-13
12-13	Strings: Implementation Problems on Strings, Two pointers in Strings and Problem on Frequency Arrays with respect to Strings.	B01-Chapter-10
14-15	Sliding Window – 1: Advance Problems on Sliding Window and Discussion of Deque STL.	B01-Chapter-11 B01-Chapter-12
16-17	Advanced String Algorithms: String Matching Algorithms like KMP, Z Function, and Rabin Karp will be discussed and problems based on that.	B01-Chapter-11
18-19	Array Interview Preparation class: Recently asked company problems based upon arrays, string and the above mentioned algorithms.	B01-Chapter-12

20-21	Recursion – 1: Basics of Recursion, basic problems on recursion to have better understanding of the call stack, Types of Recursion.	
22-25	Recursion Backtracking – 1: Implementation based Problems on recursion will be discussed in a thorough manner with call stacks, Introduction to Backtracking and basic problem on backtracking to get the flow of it. Recursion Backtracking – 2: Advance problems on backtracking.	
26-30	Recursion on Matrix: Discussion on how recursion and backtracking are used in general to solve problems on matrix/grid.	
31-32	OOPS-1: Discussion on OOPs with real world example why it is important, Discussions on classes, objects and self invoked functions like Constructors, Copy Constructor, Copy Assignment Operators, Destructors.	
33-35	OOPS-2: Discussion on characterises of OOPs like Encapsulation, Abstraction, Polymorphism, Inheritance, Dynamic Binding, Message Passing etc.	
36-38	Linked List – 2: Interview Based Problems on LL.	
ST-1 Syllabus (Lecture number 1-38)		
39-40	Stack Interview Questions: Interview Problems Based on Stacks.	B01-Chapter-11
41-42	Binary Trees – 1: Binary Trees (Definition, Implementation, Algorithms on Trees (DFS, BFS, etc.), Standard Problems on Trees)	B01-Chapter-19
43	Binary Trees – 2: Interview Problems Based on Trees.	B01-Chapter-21
44-45	Binary Search Trees – 1: Implementation of BST, Standard Problems on BST.	B01-Chapter-20
46-47	Binary Search Trees – 2: Interview Problems Based on Trees.	B01-Chapter-22
48-49	Hash maps – 2: Advance Hashing Techniques, Interview Problems based Hashing etc.	B01-Chapter-22
50-51	Priority Queue – 2: Advance Problems on Heaps.	B01-Chapter-23
52-53	DP – 1: DP, Types of DP, Importance of DP, 1-D DP company oriented questions	
54-55	DP – 2: Discussion on 2D DP and Grid DP and Advance Problems based on that.	
56-57	DP – 3: Knapsack and Selecting Distinct based DP.	
58-59	DP – 4: Problems based on DP Patterns.	B01-Chapter-23
60-61	DP – 5: Multi-dimensional DP	
62-63	DP – 6: DP on Trees.	
64-67	Greedy Algorithms – 2: Advance Problems on Greedy.	
68-69	Bit-masking – 2: Interview Based Problems on Bit Manipulations.	
70-71	Number Theory: Prime Sieve, Segmented Sieve, Euclid Algorithm, Extended Euclid Algorithm and Its Application in solving linear Diophantine equations and multiplicative modulo inverse, Totient Equation, Fermat Little Theoram etc.	
72-73	Maths: Big Integers, Combinatorics, Solving Linear Recurrences, Mathematical Expectation etc.	
ST-2 Syllabus (Lecture number 39-73)		
74-77	Graphs-1: Undirected Graphs, Cycle Detection, shortest cycle in an undirected graphs etc, Directed Graphs, Topological sort, Cycle Detection in an directed graphs)	B01-Chapter-25
78-79	Graphs-2: Kosaraju algorithm, DSU and Problems based on the above mentioned topics.	B01-Chapter-30,31
80-81	Graphs-3: Minimum Spanning Trees, Kruskal's and Prim's Algorithm, Introduction to Weighted Graphs	
82-83	Graphs-4: Dijkstras's, Bellman ford algorithms and Problems based on the above mentioned Topics.	
84-85	Graphs-5: Advance problems on Graphs.	
86-88	Tries: Introduction, Range Queries and Interview Problems on Tries.	
89-90	Revision and Doubt Clearing Sessions	
ETE Syllabus (Lecture number 1-90)

End Term 100% syllabus			

13. Academic Integrity Policy:

Education at Chitkara University builds on the principle that excellence requires freedom where Honesty and integrity are its prerequisites. Academic honesty in the advancement of knowledge requires that all students and Faculty respect the integrity of one another's work and recognize the importance of acknowledging and safeguarding intellectual property. Any breach of the same will be tantamount to severe academic penalties.
